

Analytic Skills

Scientists analyse data and see what information we can learn from it.

Coding

Scientists write code and computer programmes to help analyse data.

science for
everyone

Communication

Scientists share their work and findings with others in presentations and written documents.

Concentration

Scientists concentrate on their work to ensure they don't make mistakes.

Creativity

Scientists are creative in designing new experiments and solving problems.

Listening

Scientists need to listen to make sure they understand instructions from others in their team.

Observation

Scientists need to keep a close eye on their experiments and record what happens.

Organisation

Scientists need to be organised to plan out their experiments before they start them.

Problem Solving

Scientists have to use problem solving to overcome any issues in their experiment.

Teamwork

Every scientist has different skills and use teamwork to share work across a team.
